1.0 BACKGROUND AND JUSTIFICATION

The Learning Wheel is a convenient, concrete method for lesson planning. It is based on the wheel concept found in American Indian, European, Asian, and African traditions, as well as Western learning theory and current brain physiology knowledge. The Learning Wheel assists teachers in developing lessons and units that cater to the unique learning styles of students from various cultural backgrounds. The wheel often refers to variations between learners from similar cultural backgrounds.

As educators, we are mindful of the widening achievement gap that has emerged as a result of the lockdown, and we want to transform double decker buses with all of the requisite tools to teach core subjects to primary-aged marginalized children on a small scale.

During the study to conceptualize this idea of learning on wheels, it was noticed that various children with Special needs living in slum, rural and rehabilitation colonies of the city who cannot commute to schools for attaining education and also require different therapies because of their physical limitations. There was a need of such novel concept for those who cannot afford it and are confined to their homes, and the need is to include them in the mainstream society. It was also studied that one of the factors i.e., the inability of the parents to provide such care due to lack of resources and awareness leads to neglect of these children.

Learning on wheels is a mobile school which aims to provide quality education to children with special needs, right at their doorstep. It is an initiative taken by AASU to help children with special needs gain, build, and sustain the skills they need to work in their homes and in the community.

2.0 PROJECT OBJECTIVES

- To bring teachers to the door steps of these educationally deprived children wherever we find them.
- Learning on Wheels seeks to provide innovative solutions to the ever-evolving needs of the education sector.
- To provide informal education to illiterate children.
- To help Children with Special Needs living in slum, rural and rehabilitation colonies of the city who cannot commute to schools for attaining education and also require different therapies because of their physical limitations.
- The Learning Wheel is designed to help learners in a variety of cultures.

3.0 PROJECT OUTCOMES

The expected goal or overarching goal of the Learning on wheels project is to create the best environment or schools for all children with special needs so that they can excel as innovative, vital, and active members of our community. The Learning on Wheels project involves art, problem solving, writing, and brainstorming as ways for students to share their learning.

3.1 WHAT WE WILL BE DOING

For the public good, the advancement of education is provided to vulnerable students in deprivation areas by contact and partnership with local schools to close the achievement gap, thus allowing children to improve and access better life chances.

3.2 WHAT DIFFERENCES WE WILL MAKE?

We want to create a charity that is special in its educational approach. We hope that connecting with schools and local governments, we will be able to help close the achievement gap that emerges so early in a child's life.

4.0 TARGETED REGIONS

- Ghana
 - Greater Accra Region
 - Central Region
 - Eastern Region
 - Volta Region

5.0 PROJECT DURATION

Schedule for the project will be tailored to varying academic calendar for targeted countries or cities. The project will last for 6 months in targeted or selected cities during which the batches of beneficiaries will be graduated. Each batch will spend 2 hours daily undergoing the training and teaching to provide proper education to these needy pupils.

6.0 FOCUS AREAS

- English Language
- Integrated Science
- Core mathematics
- Social Studies
- Religious and Moral Education

7.0 PROPOSED PARTNERS

Ghana Library Authority

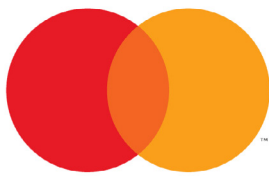

FROM THE AMERICAN PEOPLE

USAID

from the British people

UKAID

mastercard
foundation
